

NOVADYN™

High Performance Polyamides

Shakespeare Company, LLC to Produce and Market NOVADYN™ DT/DI Polyamide

Shakespeare Company, LLC, is excited to announce the transition of the NOVADYN™ DT/DI polyamide resin business and technology in the U.S. and Europe from INVISTA S.a.r.l. The patent-pending technology encompasses a family of amorphous grade nylons, which provide excellent transparency, chemical resistance and a higher T_g than traditional polyamides of 6I/6T. Applications include clear molded parts, compounds for metal replacement, additives for fiber property enhancement, films and reducing the moisture effect in traditional nylon molded parts.

Shakespeare will continue to produce and globally market the DT/DI polyamide under the NOVADYN® tradename utilizing the established product specifications. Shakespeare and INVISTA have a long history of cooperation and expect a seamless transition as Shakespeare will immediately begin servicing INVISTA's NOVADYN™ polyamide customers.

Shakespeare Company, a part Newell Brands Corporation, has been manufacturing and marketing engineered nylon resins from the Columbia, SC production facility since the mid-1970s. The DT/DI polyamide will complement our existing amorphous PA 6I/6T offering and add to the existing broad portfolio of PA 612, PA 610, PA 6/66, PA 6/69 and nylon terpolymer products.

By utilizing unique manufacturing assets and background with other amorphous nylons, Shakespeare will provide INVISTA's customers continuity of a quality supply and expand the DT/DI product offering to target additional applications and markets.
